Pranav Turlapati

New York, NY | US Citizen | 803-306-3815 | pranavturlapati02@gmail.com | LinkedIn | GitHub | pranavturlapati.com

Education

University of North Carolina at Chapel Hill — Chapel Hill, NC
B.S. in Computer Science, B.S. in Statistics & Analytics; GPA: 3.8 — *Aug 2022 – May 2026*

Skills

Languages: Python, TypeScript, JavaScript, SQL, Rust, Go, C++
Frameworks: React, React Native, Node.js, FastAPI, Flask, Terraform, LangChain Deep Agents, Langfuse
Tools: PostgreSQL, AWS, GCP, Azure, Docker, Kafka, Redis, Triton, Git, GitHub Actions, CUDA/GPU, GKE

Relevant Experience

Traba, New York City, NY — Aug 2026 – Present
Software Engineer II (promoted from Software Engineer I)

- Raised labor matching quality 8% with a TypeScript Deep Agents harness, iterating via Langfuse evals and rollouts
- Saved $25K/month by running daily AI agent ledger sweeps that flagged waste and fixed payment code logic
- Helped win a $250K contract in month one as forward-deployed engineer on Neo, an AI labor forecasting platform
- Led a 5-model AI decision benchmark on 9K cases, cutting decision costs 78% at higher accuracy via model routing

Merget, New York City, NY — Dec 2025 – Aug 2026
Founding Engineer

- Built a version control platform for AI-generated code, cutting time to production per 1M lines by 97% vs. GitHub
- Designed graph-based merge algorithms that catch code conflicts 2x more accurately than Git's line diffs
- Built all cloud infrastructure on GKE, Kafka, and PostgreSQL, scaling from 10K to 1M+ events/sec
- Led all go-to-market and investor pitches as founding engineer, helping raise a $1M seed bridge round

Splunk, Raleigh, NC — Aug – Dec 2025
Software Engineering Intern

- Built a log and trace RAG pipeline on Kafka and Milvus, scaling an internal LLM tool from 10K to 100K logs
- Prototyped a LangChain agent on the RAG index with GitHub and JIRA tools, handling 2,000+ internal queries
- Shipped a test and eval harness on GCP and Vercel for React and backend apps, saving 4 teams 12 hrs/week

Cisco, Chapel Hill, NC — May – Aug 2025
Software Engineering Intern

- Cut on-call troubleshooting ∼1.5 hrs per incident with a React and PostgreSQL dashboard for 500+ network devices
- Saved 5 hrs/week of manual ticket entry by syncing client ERP updates to JIRA via Python FastAPI on AWS
- Reduced misrouted field issues 60% by auto-emailing the right stakeholders, with infra validated in Terraform

UNC Basketball | Elipsys Labs, Chapel Hill, NC — Apr. 2024 – Jan. 2025
Software Engineer

- Delivered live analytics for 100 UNC, Duke, and NC State games on CUDA C++ at sub-100ms latency
- Tracked 3D player positions from multi-angle camera feeds with PyTorch models at 92%+ accuracy
- Streamed 100+ live coaching insights per game and practice to staff headsets via a Rust backend on GCP

Research

MIT Machine Learning Deforestation Prediction Research — June – Aug 2024
Research Assistant

- Built Python pipelines turning 50GB+ of GeoTIFF satellite imagery into pixel-level ML features
- Predicted deforestation risk with a PyTorch CNN on multi-band satellite imagery at 87% accuracy
